NAME

tiff8_to_32 – convert Radiance file to a TIFF file

SYNOPSIS

tiff8_to_32 [*options*] *input.tif* | – *output.tif*

DESCRIPTION

Convert TIFF file floating point file to TIFF 8-bit file, assuming that the floating point values are scaled to the range [0.0-1.0]. 8-bit output images use sRGB luminance enconding unless the − −*linear* **flag is given.**

OPTIONS

− −linear

Linearly scale the floating point values to 8-bit integer values.

− −offset

Add 0.5 to floating point before conversion to 8-bit integer values to help with displaying negative values. Only works for single channel input images.

LIMITATIONS

Needs − −*exposure*, − −*autoadjust*, and lots of other bells and whistles.
